

VMWARE – NSX

Networking Fundamentals and Security

Lab objective:

How to configure the network and security settings on the VMWare NSX platform within VMWare Cloud Foundation (VCF).

This lab contains 7 parts which focus on getting started with the NSX platform.

This includes the provisioning of logical segments, logical routers and basic troubleshooting.

Structure:

Lab structure
1 - Introduction to the NSX Network Virtualization Platform (15 minutes) Basic
2 - NSX Manager, Transport Nodes and Inventory Components (30 minutes) Basic
3 - NSX Virtual Private Cloud (VPC) - Self-Service Networking
4 - NSX Segments (15 minutes) Basic
5 - NSX Routing (30 minutes) Basic
6 - NSX Network Address Translation (30 minutes) Basic
7 - NSX Operations (30 minutes)

Software used:

- VMs
- Microsoft Windows Server 2019 (64-bit)
- NSX
- VMware Cloud Foundation

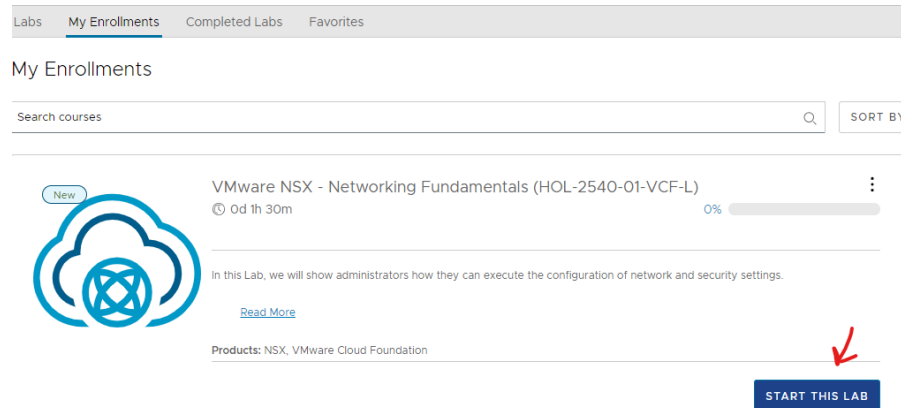

LINK:

Open the following link.

<https://labs.hol.vmware.com/HOL/catalog/lab/13955>

Lab access steps:

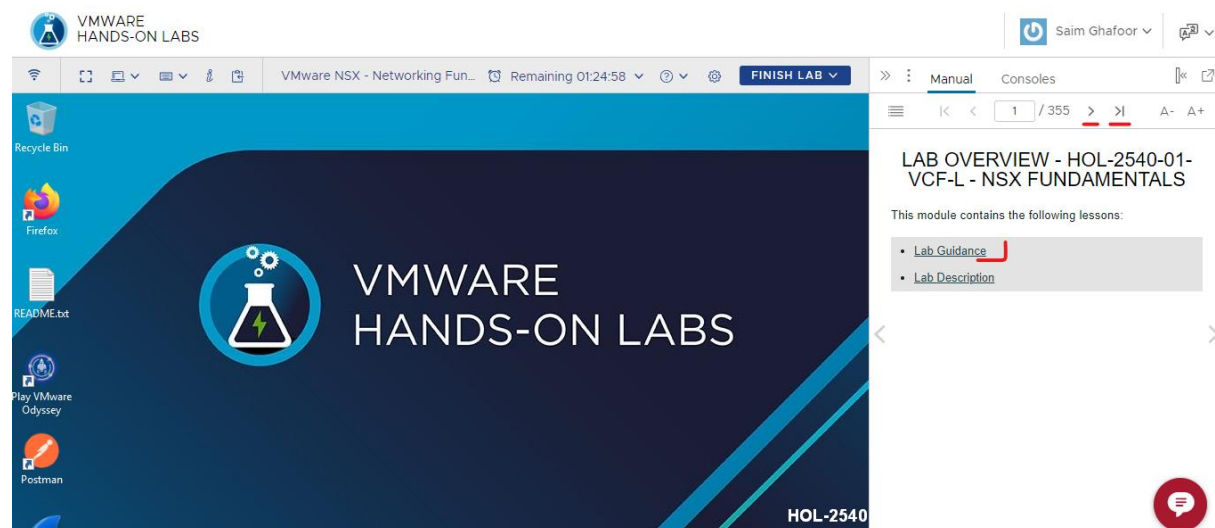

- Click on the Enrol button.
- Enrol yourself using your ATU student ID.
- VDI will open.

Click on the START THIS LAB button.

On the next page, again click on Start this lab. It will take some time to load.

You will see the following interface.

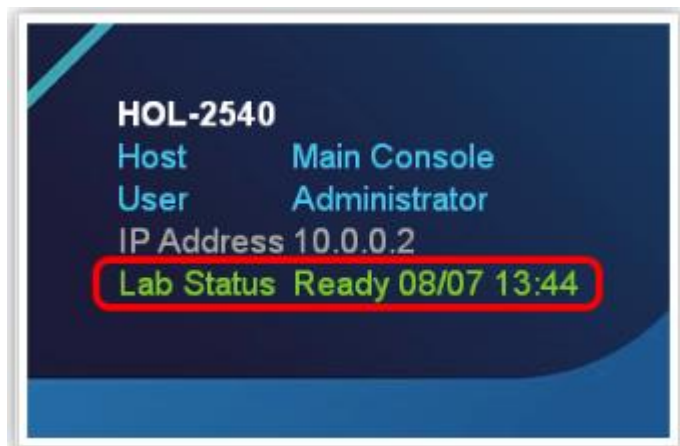

After this, just follow the instructions. Read the lab guidance to learn about the modules in this lab. Read the description as well, as it is important.

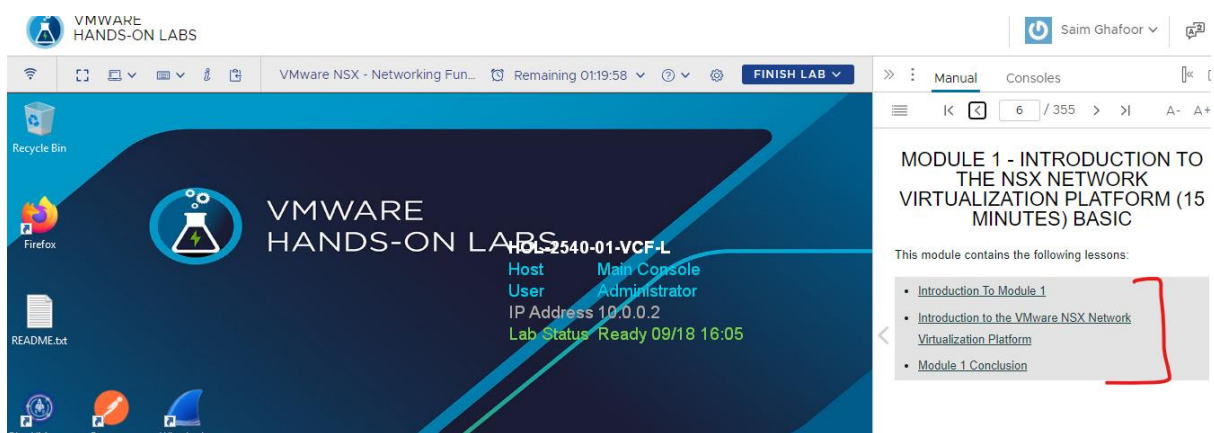

Follow the instructions to begin the lab.

Carefully follow the steps/instructions as provided in the manual within VDI. Click on the greater than sign '>' to move to the next page, and proceed as instructed.

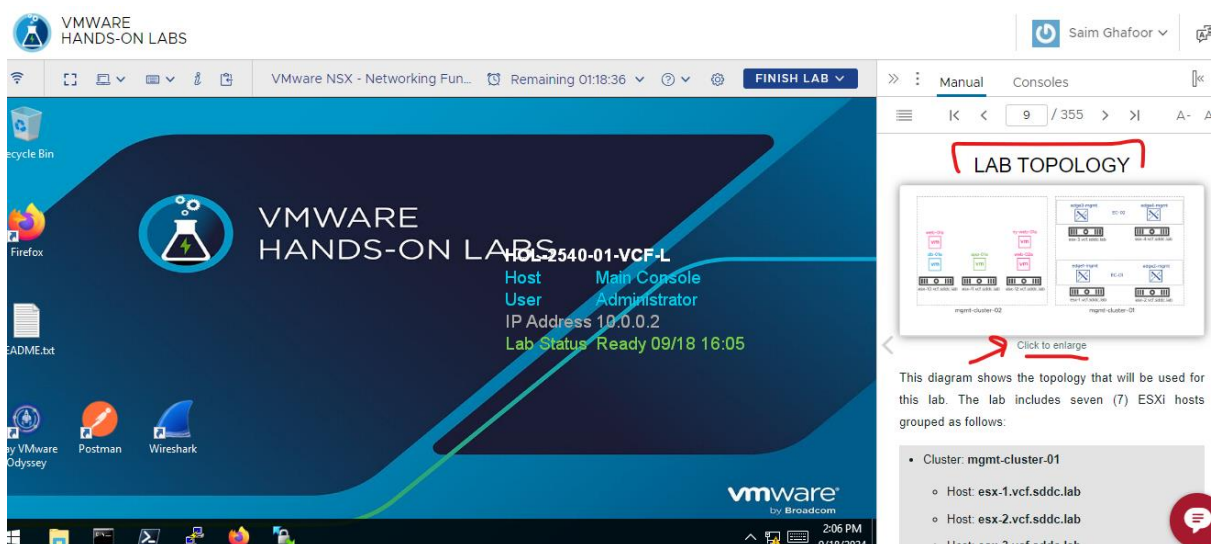

Make sure, you get the ready status on the screen. Click on the screen and you will see it.

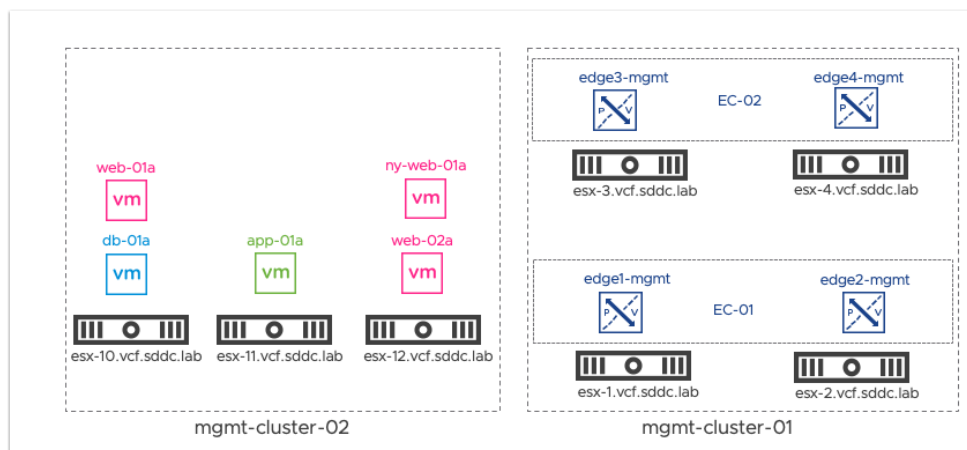

Read the structure of the lab, divided into modules.

For example, when you will read the description. It will show you the topology of the lab as follows. You can enlarge the figures to have a look on topology diagram.

Full Image

An explanation of each of these hosts is provided in the description. Do not ignore it and read to have a good understanding.

Actual lab steps will start from Page 17. But, I will strongly suggest reading the description which appears before page 17 and also after page 17.

*** EXPLORE the interface, whenever possible. This interface creation is a difficult job, and you won't get a chance to familiarize yourself with such interface, until you are working in the cloud environment on Software-Defined Data Centres. SO, ITS IMPORTANT TO EXPLORE. Do not change the settings, just explore the options.

TASKS:

Complete the online lab.

Understand the series of configurations and document them.
